SecuriSHAPE allows the automatic detection of structural deformations and the triggering of alerts in real time

## AVANTAGES

- Integrated optical components use advanced stereoscopic vision technology to capture 3D images with precision
- The analysis is done in real time and allows instant detection of deformations and torsions of structures at the submillimetre scale
- SecuriSHAPE units are capable of operating in a wide variety of hostile environments, indoor and outdoor
- The solution, with its Artificial Intelligence modules, triggers real-time alerts in the event of structural or dimensional deformations exceeding a predefined threshold

*Our daily challenge is to develop innovative solutions to enable precise control of the deformations of complex structures and to trigger automatic alerts*
